

HR Attrition Review | Key Findings & Recommended Actions

HR Director · Based on 1,470 employee records · June 2026

1,470 Employees reviewed	237 Left in period	16.1% Overall leave rate	~30% Leave rate – first 2 yrs
-----------------------------	-----------------------	-----------------------------	----------------------------------

WHAT WE FOUND ABOUT EMPLOYEE LEAVE RATES

- 1 in 6 employees left during the review period. Several clear patterns explain where and why this is happening:
- Pay gap:** Employees who left earned a median of \$3,200/month vs. \$5,200 for those who stayed — nearly 40% less.
 - Overtime:** 30.5% leave rate for overtime workers vs. 10.4% for those without — the single strongest warning sign we found.
 - Business travel:** Frequent travelers leave at 25% vs. 8% for non-travelers — a threefold difference.
 - Stock options:** Employees with no options leave at 24% vs. 9% for those with even a basic level — a 60%+ gap.
 - Early tenure:** ~30% of employees leave within their first two years, almost double the overall average.

WHICH TEAMS AND ROLES ARE MOST AFFECTED

Role	Department	Leave Rate	Risk	Suggested Focus
Sales Representative	Sales	39.8%	Critical	Base pay + mentor scheme
Laboratory Technician	R&D	23.9%	High	Workload review + pay audit
Human Resources Staff	HR	23.1%	High	Internal career path review
Sales Executive	Sales	17.5%	Moderate	Base pay + mentor scheme

WHAT THIS MEANS FOR HR

- Turnover is concentrated — Sales and parts of R&D account for a disproportionate share. Broad company-wide programmers will be less effective than targeted action on specific roles.
- Workload is burning people out before salary does. Overtime carries more predictive weight than pay level alone.
- We lose people before they've settled in. The first two years are the highest-risk window and need more deliberate support.
- Financial security beyond base pay matters. Even a basic stock option level cuts attrition by more than half.

CLEAR, PRACTICAL NEXT STEPS

- Sales Rep Retention Program.** Restructure pay to reduce commission dependency. Assign a first-year mentor and review base salary benchmarks. A 40% leave rate is unsustainable.
- Overtime Controls.** Require manager approval for regular overtime. Run workload audits in high-overtime teams and offer compensatory leave or wellness support.
- Stronger Onboarding.** Introduce 30/60/90-day check-ins for all new starters and pair each person with a buddy from day one.
- Travel Policy Review.** Reduce unnecessary trips, increase travel reimbursement, and offer flexible working as an offset for those who travel frequently.
- Extend Baseline Stock Options.** Consider broadening access to even a minimum level of options across higher-risk roles — the attrition impact is significant.

Note for HR: These findings show patterns across groups, not certainties for individuals. Use them to guide supportive check-ins and career conversations — not to pre-judge any employee's intentions.
